Effect of Lactomass on the Amount of Feed Intake in Broiler Cycle

Product name: Lactomass

Product type: Nutrient and growth promoter

Product form: Suspension

Number of birds: 5000

Cycle days: 32

Strain: Cobb

Source: Al-Nahar - Rasheed

Feed brand: Al-Eman

Start date: October 2018

Place of farm: Abou Hommos - Albuhayra

Birds were given Lactomass as a program for 180 hours divided by doses start from day one, and this is the program in details.

Day	Dose	Hours
Receiving first 12 hours	0.5 ml / liter	12
4:7	0.5 ml / liter	36 divided by 3 days
10-11	0.5 ml / liter	24 divided by 2 days
17-18	0.5 ml / liter	24 divided by 2 days
26:32	1 ml / liter	84 hours divided by 7 days

Using Lactomass as such, reduced the amount of feed used in the cycle and the number of days was reduced to 32 days and the results were as follows:

Total days	32
Feed per bird in gm.	2800
Average weight in gm.	2150

Lactomass showed a significant results by trimming cycle length and reducing feed intake about 700 grams per bird. The final amount of feed were just 14 tons instead of 17,5 tons.

Birds achieved needed weight in 32 days.
